

# Lafayette County Health Department

The Lafayette County Health Department has been in existence since 1927. Over those years many people and programs at our Health Department have experienced change. One thing has not changed however, our agency's basic mission: to promote optimal physical and emotional health for county residents. We strive to serve all in the county in the best possible manner in order to protect and enhance health. A lot is happening in the world and in health care today! It is my hope that our organization is a place you can turn to for reliable and accurate information. We hope this website is one information seeking tool you find useful. Our website has lots to offer, including information on each of our program's services, prevention education, as well as all the right links to additional reliable websites.

So, sit back and navigate our site. We truly hope you find the information you are looking for. If you do not, we welcome and appreciate feedback.

After all, your good health is our mission.

Debbie Siegenthaler, RN, MSN

Director/Health Officer
